

**WESTCO™ HRT RESINS**  
**Aliphatic C-5 Hydrocarbon Resins**  
**CAS# 26813-14-9**

**Technical Data:**

Westco™ HRT resins are thermoplastic aliphatic (C5) resins typically used as tackifiers in rubber, adhesives, PSAs, coatings, traffic marking paint, and asphalt modification applications. Westco™ HRT resins are available with 100°C and 110°C softening points, excellent color properties, and color stability. They also possess great tack and peel properties and wide compatibility and solubility.

	<u>HRT 95</u>	<u>HRT 95L</u>	<u>HRT 105</u>
*Softening point, °C	95-105	95-105	105-115
*Color, Gardner	7 max	4 max	6 max
*Acidity, mg KOH/g	1 max	1 max	0.5 max
*Ash, %	0.1 max	0.1 max	0.1 max
Specific Gravity, typical:	0.94	0.94	0.94

**Appearance for all the above: Light Yellow Granules**

\*Values reported on Certificate of Analysis.  
Packaging: 25 Kg Net Bags
